DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-4 and 8 are rejected under 35 U.S.C. 102(b) as being anticipated by Nakazawa et al (US Pat. 5,583,751).

Figure 9 of Nakazawa clearly shows a light arrangement with a power supply (or source) connected at least two lighting elements (50c, 50f, 50h, 50l 50m, 50 p, 50n and 50o) while integrally attached to at least two corresponding switching elements or relays ((50d, 50e, 50g and 50j).

3. Claims 1-4, 8 and 9 are rejected under 35 U.S.C. 102(b) as being anticipated by Weiner et al (US Pat. 4,215,277).

Figure 4 in Weiner shows a lighting arrangement that could be connected to the common house-hold power supply or source (not shown); wherein the arrangement clearly includes at least two light elements or sources (L1-L4) and at least two corresponding switches (Q1-Q4) that inherently function with their voltage supply to ultimately control the output of light elements.

4. Claims 1-9 are rejected under 35 U.S.C. 102(e) as being anticipated by Fehd et al. (US Pub. 2002/0033680).

Art Unit: 2821

Figures 1a-1b and its corresponding text clearly anticipate the claimed invention. As it can be seen in figure 1a, loads A-K are responsive to the switching network DMX that is in turned being manipulated by voltage frequency control (160) or voltage supply. The fact that loads A-K are sequentially controlled by switching network DMX as a response to the voltage supply (160) forces the power source to sequentially drive the loads in responding to the switching network. Note, the switching network inherently includes number switching elements to perform their assigned tasks.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 5-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Weiner et al. (US Pat. 4,215,277).

Thus far, Weiner does not specify the use of particular light product as their light source such as described in claims 5-7. However, including such commercially available product as light source would have been much convenient as it simplifies the process of implementing Weiner's circuit.
